Professional Summary

Full-stack developer and DevOps engineer with 5+ years of experience building web applications and 6+ years managing production infrastructure. Specialized in Laravel-based ERP/POS systems, WooCommerce integrations, self-hosted infrastructure, Dockerized deployments, Linux VPS administration, and secure Cloudflare-based networking.

Experienced in delivering complete software solutions from requirements analysis, system architecture, backend development, frontend implementation, database design, deployment, monitoring, troubleshooting, and continuous improvement. Strong hands-on background in PHP, Laravel, Vue.js, Livewire, Inertia.js, MySQL, Redis, Docker, Nginx, Cloudflare, TrueNAS Scale, and Linux server maintenance.

Skills Summary

- **Backend Development:** PHP, Laravel 12, REST API, Laravel Queue, Laravel Scheduler, Observer pattern, database transactions, service-layer architecture
- **Frontend Development:** Vue.js 3, Livewire 3, Inertia.js, Alpine.js, React, Tailwind CSS, responsive UI implementation
- **Databases & Caching:** MySQL 8, PostgreSQL, Redis, SQLite, query optimization, indexing, ACID-compliant transaction design
- **DevOps & Infrastructure:** Docker, Docker Compose, Nginx, PHP-FPM, Linux VPS, AWS EC2, TrueNAS Scale, AAPanel, production deployment
- **Networking & Security:** Cloudflare DNS, CDN, Tunnel, Zero Trust Access, SSH hardening, SSL/TLS, firewall and port management

- **CMS & E-Commerce:** WordPress, WooCommerce, WooCommerce REST API, Redis object caching, inventory synchronization
 - **Automation & Tools:** Git, GitHub Actions, cron jobs, Laravel Scheduler, VS Code, SSH, systemd, journalctl
-

Work Experience

Full-Stack Developer & DevOps Engineer — Haen Teknologi Nusantara

Kudus, Indonesia · Full-time · Jan 2020 – Jun 2026

Haen Teknologi Nusantara is an Indonesian technology company with hardware retail, computer service, and software development business units.

- Architected and led the development of **Arabica ERP & POS**, a production-grade Laravel system covering POS, inventory, HR, payroll, financial reporting, purchasing, RMA logistics, and marketing workflows.
- Built and maintained a Laravel-based ERP platform used by approximately **20 daily concurrent users** across multiple roles and operational departments.
- Implemented database-level transaction safety using **pessimistic locking** to prevent stock mutation race conditions and protect accounting integrity.
- Integrated the **WooCommerce REST API** with Laravel using Observer patterns, queue-based processing, exponential backoff retry handling, and scheduled reconciliation jobs.
- Developed geolocation-based attendance features using the HTML5 Geolocation API and Haversine geofence calculations.
- Built and maintained **Haen Store**, a WooCommerce e-commerce site with homepage redesign, responsive layout improvements, Redis object caching, Nginx optimization, and ERP stock synchronization.
- Developed the **Haen Studio** company landing page with responsive design, SEO-focused structure, and performance-oriented implementation.
- Deployed and maintained Laravel production stacks using **Docker Compose, Nginx, PHP-FPM, MySQL 8, Redis, Laravel Queue Worker, and Laravel Scheduler**.

- Built and operated self-hosted infrastructure on **TrueNAS Scale**, including ZFS datasets, SMB/CIFS file sharing, Docker workloads, and Immich automated backup workflows.
- Configured **Cloudflare Tunnel** to provide secure public access to internal services without exposing the home IP address or using router port forwarding.
- Set up and maintained a **Jagoan Hosting VPS** on Ubuntu 22 LTS with APanel, Nginx, MySQL 8, Redis, PHPMyAdmin, and server performance tuning.

AWS & Self-Hosted Web Developer — Freelance

2019 – Present

- Set up and managed AWS EC2 instances for client websites using Ubuntu 18 LTS.
- Configured security groups, SSH key pairs, Elastic IPs, EBS volumes, and baseline server security.
- Deployed and maintained WordPress websites, including deptamedia.com and mamamajumapan.com.
- Managed CyberPanel-based hosting, email routing, DNS configuration, SSL/TLS automation with Let's Encrypt, SSH hardening, and port management.
- Supported clients with server troubleshooting, performance optimization, website migration, and hosting maintenance.

Cloudflare Infrastructure Manager — Freelance

2017 – Present

- Managed Cloudflare DNS migration and long-term domain infrastructure for multiple websites and services.
- Used Cloudflare CDN, cache rules, Tunnel, Pages, Workers, and Zero Trust Access to improve reliability, security, and remote access.
- Implemented Cloudflare Tunnel for secure access to self-hosted services and VPS-hosted applications without exposing origin IP addresses.
- Configured DNS records, SSL/TLS settings, access policies, and caching rules for client and internal projects.

Selected Projects

Arabica ERP & POS

Laravel 12 Livewire 3 Alpine.js MySQL 8 Redis Docker Nginx PWA

Production ERP and POS system for Haen Komputer, deployed on TrueNAS Scale using Docker and used by approximately 20 concurrent daily users.

- Built POS cashier workflows, barcode-based cart handling, inventory management, HR/payroll, financial reports, and social media content planning modules.
- Implemented StockBatch and StockMutation logic with `lockForUpdate()` to enforce ACID-safe stock transactions.
- Built WooCommerce stock synchronization using Laravel Observer, Queue, REST API calls, exponential backoff retries, and scheduled reconciliation.
- Deployed the application stack with PHP-FPM, Nginx, MySQL 8, Redis, Laravel Queue Worker, Laravel Scheduler, persistent Docker volumes, and Cloudflare Tunnel.

Source code is proprietary.

Hook ERP — Open Source

Laravel Vue.js Inertia.js Filament MySQL Docker

Open-source modern POS, inventory, and business management system for small to medium-sized businesses. Served as the main front-end contributor and supported the project architecture.

- Built responsive SPA workflows using Vue.js and Inertia.js.
- Implemented POS, inventory, warehouse control, employee attendance, payroll, accounting, and financial reporting features.
- Designed a Docker-compatible deployment structure with queue-based asynchronous processing.
- Improved user interface consistency, navigation flow, and front-end maintainability.

Repository: github.com/alamulhuda/hook

Haen Store

WordPress WooCommerce Nginx Redis PHP 8.2

Production WooCommerce e-commerce website for Haen Komputer's computer and smartphone retail business.

- Redesigned the homepage and improved the responsive layout.
- Configured Redis object caching and Nginx reverse proxy optimization.
- Integrated WooCommerce inventory synchronization with Arabica ERP through scheduled automation.
- Improved website reliability and performance through caching, server tuning, and deployment maintenance.

Circul — Open Source

Flutter Dart SQLite Supabase OpenStreetMap

Prototype mobile application for community-driven waste mapping and real-time environmental reporting. Initiated the project with the goal of releasing it as an open-source platform.

- Designed a concept for photo-based waste reports with GPS tagging.
- Planned local-first offline persistence using SQLite with Supabase synchronization.
- Implemented a map-based reporting concept using OpenStreetMap and geospatial visualization.
- Defined the product direction for community reporting, environmental data collection, and location-based issue tracking.
