Professional Summary

Full-stack developer and DevOps engineer with 5+ years of experience building web applications and 6+ years managing production infrastructure. Specialized in Laravel-based ERP/POS systems, WooCommerce integrations, self-hosted infrastructure, Dockerized deployments, Linux VPS administration, and secure Cloudflare-based networking.

Experienced in delivering complete software solutions from requirements analysis, system architecture, backend development, frontend implementation, database design, deployment, monitoring, troubleshooting, and continuous improvement. Strong hands-on background in PHP, Laravel, Vue.js, Livewire, Inertia.js, MySQL, Redis, Docker, Nginx, Cloudflare, TrueNAS Scale, and Linux server maintenance.

Skills Summary

- **Backend Development:** PHP, Laravel 12, REST API, Laravel Queue, Laravel Scheduler, Observer pattern, database transactions, service-layer architecture.
- **Frontend Development:** Vue.js 3, Livewire 3, Inertia.js, Alpine.js, React, Tailwind CSS, responsive UI implementation
- **Databases & Caching:** MySQL 8, PostgreSQL, Redis, SQLite, query optimization, indexing, ACID-compliant transaction design
- **DevOps & Infrastructure:** Docker, Docker Compose, Nginx, PHP-FPM, Ubuntu/Debian VPS, AWS EC2, TrueNAS Scale, AAPanel, production deployment

- **Networking & Security:** Cloudflare DNS, CDN, Tunnel, Zero Trust Access, SSH hardening, SSL/TLS, firewall and port management
 - **CMS & E-Commerce:** WordPress, WooCommerce, WooCommerce REST API, Redis object caching, inventory synchronization
 - **AI-Assisted Development:** Claude, Codex, Gemini, DeepSeek - prompt engineering, code generation, debugging, architecture planning
 - **Automation & Tools:** Git, GitHub Actions, cron jobs, Laravel Scheduler, VS Code, SSH, systemd, journalctl
-

Work Experience

Full-Stack Developer & DevOps Engineer - Haen Teknologi Nusantara

Kudus, Indonesia · Full-time · Jan 2020 - Present

Haen Teknologi Nusantara is an Indonesian technology company with hardware retail, computer service, and software development business units.

- Led development of **Arabica ERP & POS**, a Laravel-based ERP system serving ~20 concurrent users across POS, inventory, HR, payroll, finance, purchasing, RMA, and marketing modules.
- Ensured data integrity with pessimistic locking for stock mutations and financial transactions.
- Built WooCommerce - Laravel integration with Observer pattern, queue-based processing, and scheduled reconciliation for inventory sync.
- Developed geolocation-based attendance using HTML5 Geolocation API and Haversine geofence.
- Built and maintained **Haen Store** (WooCommerce e-commerce) with Redis caching, Nginx optimization, and ERP inventory sync.
- Managed full DevOps lifecycle with Docker Compose, Nginx, PHP-FPM, MySQL 8, Redis, Queue Worker, and Scheduler on TrueNAS Scale and Linux VPS.
- Configured Cloudflare Tunnel, Zero Trust Access, and self-hosted infrastructure with automated backup workflows.

Freelance Developer & Infrastructure Engineer - Self-employed

2017 – Present

- Set up and managed AWS EC2, Linux VPS, and CyberPanel hosting environments for client websites.
- Deployed and maintained WordPress/WooCommerce sites (e.g. deptamedia.com, mamamajumapan.com) with SSL/TLS, DNS, caching, and performance optimization.
- Managed Cloudflare infrastructure: DNS migration, CDN, Tunnel, Zero Trust Access, and SSL/TLS for multiple client and internal projects.
- Provided server troubleshooting, website migration, email routing, and long-term hosting maintenance.

Selected Projects

Arabica ERP & POS

Laravel 12 Livewire 3 Alpine.js MySQL 8 Redis Docker Nginx PWA

Production ERP and POS system for Haen Komputer, deployed on TrueNAS Scale using Docker and used by approximately 20 concurrent daily users.

- Built POS cashier workflows, barcode-based cart handling, inventory management, HR/payroll, financial reports, and social media content planning modules.
- Implemented StockBatch and StockMutation logic with `lockForUpdate()` to enforce ACID-safe stock transactions.
- Built WooCommerce stock synchronization using Laravel Observer, Queue, REST API calls, exponential backoff retries, and scheduled reconciliation.
- Deployed the application stack with PHP-FPM, Nginx, MySQL 8, Redis, Laravel Queue Worker, Laravel Scheduler, persistent Docker volumes, and Cloudflare Tunnel.

Source code is proprietary.

Hook ERP — Open Source

Laravel Vue.js Inertia.js Filament MySQL Docker

Open-source modern POS, inventory, and business management system for small to medium-sized businesses. Served as the main front-end contributor and supported the project architecture.

- Built responsive SPA workflows using Vue.js and Inertia.js.
- Implemented POS, inventory, warehouse control, employee attendance, payroll, accounting, and financial reporting features.
- Designed a Docker-compatible deployment structure with queue-based asynchronous processing.
- Improved user interface consistency, navigation flow, and front-end maintainability.

Repository: github.com/alamulhuda/hook

Circul — Open Source

Flutter Dart SQLite Supabase OpenStreetMap

Prototype mobile application for community-driven waste mapping and real-time environmental reporting. Initiated the project with the goal of releasing it as an open-source platform.

- Designed a concept for photo-based waste reports with GPS tagging.
- Planned local-first offline persistence using SQLite with Supabase synchronization.
- Implemented a map-based reporting concept using OpenStreetMap and geospatial visualization.
- Defined the product direction for community reporting, environmental data collection, and location-based issue tracking.
